

TAKE CONTROL OF YOUR ASSETS WHILE MAINTAINING OPTIONALITY

The recent global pandemic coupled with OPEC+ disagreements are leading to historic energy commodity price volatility. Upcoming lender borrowing base redeterminations, lack of outside investment, and strained M&A markets are adding to the systemic challenges facing asset owners. Ultimately, these shocks are shifting asset life cycle strategy from the recent buy-build-sell to a PDP produce out/harvest model.

Private equity firms and lien holders are utilizing CAMS to reshape their assets' go-forward strategy. CAMS' ability to provide economies of scale and broad-base, experienced professionals, enables a right-sized solution to operational and corporate G&A budgets. CAMS provides an economical solution for all operations and supporting back-office services that preserves maximum asset value while maintaining optionality for asset owners.

OUR APPROACH

Due Diligence

CAMS begins by reviewing all operational and financial data including public and proprietary market comps and KPIs to identify the optimal go-forward strategy.

Strategy Development

CAMS develops a reorganization plan, cost savings initiatives and a comprehensive budget including potential workovers, PUD development and other business development opportunities to the client for approval.

Execution

CAMS leverages its economies of scale to cost effectively execute the approved plan and develops real-time, custom dashboards to streamline cash management and reporting.

RELATIONSHIP MANAGEMENT

We possess years of managing relationships between debtors, banks, vendors and service providers in a fully-transparent approach.

- ◆ Regulatory
- ◆ Land
- ◆ Audit/tax management
- ◆ Reporting
- ◆ IT
- ◆ HR

AREAS OF EXPERTISE

Cost Control

- ◆ **Compression requirements:** Align horsepower requirements and configurations to match current production forecasts.
- ◆ **Production chemical program:** Implement tools necessary to track prescribed chemical ratios and optimize treatments.
- ◆ **Lift economics and solutions:** Fit artificial lift programs to individual wells to deliver an optimized economic solution.
- ◆ **Single well economics:** Assess possible need for well shut-in program to maintain optimum cash flow while maintaining lease obligations.
- ◆ **Pumper routes:** Reassess pumper routes and maintenance schedules.
- ◆ **Gathering agreements:** Assess gathering agreements and fees to best fit production forecasts.
- ◆ **Produced water expenses:** Assess and review most economical solution.

Accurate and Timely Reporting

CAMS builds custom dashboards and leverages proprietary data to bring greater transparency into costs, decreasing the lag time between operations and accounting.

- ◆ **Operating Budget:** Forecast operating and capital cash requirements, and a forward-looking, 13-week cash flow.
- ◆ **Lease Operating Expense:** Track cost to the field level in real time and monitor critical KPIs via the Microsoft Power BI web-based reporting tools.
- ◆ **Capital Sources and Uses:** Identify imminent and historical capital movements to provide detail about capital allocation.

WHY ASSET OWNERS CHOOSE CAMS?

Validated and Trusted Asset Management

CAMS has successfully managed over 150 energy assets on behalf of 65 private equity firms, financial institutions and family offices since 2007.

Economies of Scale

CAMS' 1,500 employees, proprietary data, in-house, owned software and buying power with outside third parties has on average decreased our clients G&A by 38%.

Provide Optionality

CAMS' asset management model provides asset owners the most cost-effective solution to maintain ownership until a viable exit can be achieved.
